For your website to be seen, it needs a place to stay. The computer files must be kept on a computer that is running 24 hours a day, 7 days a week, connected to the internet with a fixed computer address (so that the computers can find it) and a fixed domain name (so that people can find it.) This is called a web site "host."

For just \$14.77 a month--considerably less than most cell phone bills--Shuta Multimedia will provide that place for you. We will setup your website and monitor its status. You never have to worry if your site is available.
